FOR IMMEDIATE RELEASE

Magno International, LP assists Project Medishare For Haiti, Inc., in Relief Efforts

Magno International, LP, a Miami-based global logistics services provider, has been assisting Project Medishare For Haiti, Inc., and the University of Miami's Miller School of Medicine and Global Institute for Community Health and Development, in transporting critical medical equipment, supplies, water, food, and general relief goods to Port-Au-Prince (PAP), Haiti.

Raul Pedraza, President and Chief Executive of Magno International, commented: "I have known Dr. Barth Green personally for a number of years and am very familiar with his community involvement. When he asked me to become personally engaged with Project Medishare as a Board member there was never a moment of hesitation that this was an effort that I wanted to support. The work that Project Medishare has delivered in Haiti over the decades has been remarkable, and our long running presence in country provided us with a solid foundation to deploy a rapid response team as tragedy struck Haiti yet again. Barth was one of the first doctors on the ground immediately following the earthquake. When he called to describe the devastation and request our assistance in coordinating logistics efforts, we pledged our immediate support."

Jesus Lovo, EVP Operations at Magno International, added: "In the days following the earthquake our critical mission was to transport the structure and other components of the field hospital donated by the Alonzo Mourning Foundation and that Project Medishare and the University of Miami were setting up just outside of PAP airport. We were glad to count with the support of our various strategic partners in these efforts, including Crane Worldwide Logistics, Amerijet, Federal Express and LAN Cargo, in addition to airlift provided by the USG USAID/OFDA. Royal Caribbean Cruise Line has also provided space on their ships for the transportation of urgent items, in spite of the challenges presented by the lack of infrastructure from Labadee to Port-Au-Prince. However, we know that the challenge going forward is having enough confirmed capacity available for us to secure the uninterrupted flow of equipment, medical supplies, food and water to support the ground operation in Haiti. At this moment we have critical items in multiple Miami warehouses awaiting confirmation of lift, including surgical mattresses, cots, IV solution, casting material, wound kits, gloves, orthopedic devices, disinfectants, food and water. We also have critical medical equipment and offers for additional donations from multiple organizations for which we lack immediate lift."

Jenna Green, with Project Medishare, stated: "Raul's team has been a great resource. Our core competency is in providing medical services, not coordinating transportation, so having a professional logistics organization in our midst filled a critical need from day one."

Green further stated: "Our task now is to support this ongoing operation efficiently and in a fiscally responsible manner, consistent with our mission as a not-for-profit organization to provide healthcare and development services to people in need. We are very appreciative for the support we have received to date but ask all air and ocean carriers servicing Haiti, and those who

are resuming their services, to consider lending their ongoing support to our operation by donating or discounting their transportation services for our organization. We realize these are trying times but are hopeful that the teamwork attitude displayed during the first couple of weeks following this disaster can last until at least some basic services are restored in a more permanent basis and housed in more permanent structures in Haiti.”

DISCLOSURES

Project Medishare for Haiti, Inc., a 501.3 non-profit registered in the State of Florida, was founded in 1994 by Drs. Barth Green and Arthur Fournier from the University of Miami School of Medicine. It is an organization dedicated to sharing its human and technical resources with its Haitian partners in the quest to achieve quality healthcare and development services for all. This mission is accomplished through two distinct but complimentary programs which now frequently intersect, such as the [Community Health Program](#) and the [Integrated Community Development Program](#).

The Global Institute for Community Health & Development aims to mobilize global collaborations in the pursuit of health and prosperity for all human beings. The institute seeks to generate new knowledge and apply interdisciplinary solutions to impact the most challenging health and development dilemmas of the millennium and contribute to the fulfillment of the Millennium Development Goals. The Global Institute is led by the Miller School of Medicine and supported by schools throughout the University of Miami.

Magno International, LP is a Miami-based global logistics service provider offering end to end supply chain management solutions. Magno International is a minority-owned and veteran-owned Small Business and is a registered federal contractor, approved carrier to the Department of Defense (DOD), and under contract with the General Services Administration (GSA) for business transacted with the US Government Civilian Agencies.
